           The invention relates to neoxanthin cleavage enzymes and their corresponding cDNA molecules. Neoxanthin cleavage enzyme plays a key role in endogenous abscisic acid (ABA) biosynthesis under drought stress. Neoxanthin cleavage enzyme is used for improving stress tolerance in a plant when expressed in a plant cell. The invention also relates to methods for increasing or decreasing stress tolerance in a plant by introducing the DNA into the plant, and a transgenic plant into which a neoxanthin cleavage enzyme is introduced. The improvement of stress tolerance in plants is useful, for example in plant breeding. Neoxanthin cleavage enzyme genes are useful for producing transgenic plants. An arid land can be improved by growing transformant weed for several years and then removing the weed by growing transformant weed for several years and then removing an inducible promoter. The present cDNA sequence encodes by copersicon esculentum neoxanthin cleavage enzyme, LeNCED1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1741
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1741

corresponding cDNA molecules. Neoxanthin cleavage enzyme plays a key role in endogenous abscisic acid (ABA) biosynthesis under drought stress. Neoxanthin cleavage enzyme is used for improving stress tolerance in a plant when expressed in a plant cell. The invention also relates to methods for increasing or decreasing stress tolerance in a plant by introducing the DNA into the plant, and a transgenic plant into which a neoxanthin cleavage enzyme is introduced. The improvement of stress tolerance in plants is useful, for example in plant breeding. Neoxanthin cleavage enzyme genes are useful for producing transgenic plants. An arid land can be improved by growing transformant weed for several years and then removing the weed by specifically lowering stress tolerance in the weed by inducing an inducible promoter. The present cDNA sequence encodes Vigna unguiculata neoxanthin cleavage enzyme, CPRD65 (CowPea Responsive to Dehydration) protein. CPRD65 gene is isolated from cowpea plant.
                                                                                                                                                                                                                                                                                                                                                      producing

                                                                                                                                                                                                 DЪ
                                                                                        Qy
                                                                                                                                                                                                                     The invention relates to neoxanthin cleavage enzymes and their corresponding cDNA molecules. Neoxanthin cleavage enzyme plays a key crole in endogenous abscisic acid (ABA) biosynthesis under drought stress. CN Neoxanthin cleavage enzyme is used for improving stress tolerance in a comethods for increasing or decreasing interest to relates to introducing the DNA into the plant, and a transgenic plant into which a cheavage enzyme is introduced. The improvement of stress tolerance in plants is useful, for example in plant breeding. Neoxanthin cleavage enzyme is useful for producing transgenic plants. An arid cleavage enzyme genes are useful for producing transgenic plants. An arid cleavage enzyme genes are useful for producing transgenic plants. An arid cleavage enzyme weed by growing transformant weed for several years and then removing the weed by specifically lowering stress tolerance in the weed by inducing an inducible promoter. The present cDNA sequence encodes arabidopsis thaliana neoxanthin cleavage enzyme, AtNCED1 protein.

The AtNCED1 cDNA is obtained from an Arabidopsis plant-derived cDNA clibrary using a cDNA of the CPRD65 (CowPea Responsive to Dehydration) are several plant as a probe.

corresponding cDNA molecules. Neoxanthin cleavage enzymes and their role in endogenous abscisic acid (ABA) biosynthesis under drought stress. Neoxanthin cleavage enzyme is used for improving stress tolerance in a plant when expressed in a plant cell. The invention also relates to methods for increasing or decreasing stress tolerance in a plant her box or decreasing stress tolerance in a plant here.

neoxanthin cleavage enzyme is introduced. The improvement of stress tolerance in plants is useful, for example in plant breeding. Neoxanthin cleavage enzyme genes are useful for producing transgenic plants. An arid land can be improved by growing transformant weed for several years and then removing the weed by specifically lowering stress tolerance in the weed by inducing an inducible promoter. The present cDNA sequence encodes seem anys neoxanthin cleavage enzyme, VP14 protein related to the

```
CC corresponding cDNA molecules. Neoxanthin cleavage enzymes and their CC corresponding cDNA molecules. Neoxanthin cleavage enzyme plays a key CC role in endogenous abscisic acid (ABA) biosynthesis under drought stress. CC Neoxanthin cleavage enzyme is used for improving stress tolerance in a cc plant when expressed in a plant cell. The invention also relates to CC methods for increasing or decreasing stress tolerance in a plant by CC introducing the DNA into the plant, and a transgenic plant into which a cc neoxanthin cleavage enzyme is introduced. The improvement of stress tolerance in plants is useful, for example in plant breeding. Neoxanthin CC cleavage enzyme genes are useful for producing transgenic plants. An arid CC land can be improved by growing transformant weed for several years and then removing the weed by specifically lowering stress tolerance in the weed by inducing an inducible promoter. The present cDNA sequence encodes C Arabidopsis thaliana neoxanthin cleavage enzyme, AKUCED5 protein.

The AtNCED5 cDNA is obtained from an Arabidopsis plant-derived cDNA C gene isolated from cowpea plant as a probe.

                      This invention describes a novel polynucleotide sequence (I) which encodes a protein capable of regulating the synthesis of abscisic acid. The invention also describes (1) an oligonucleotide encoding a protein of a gene obtained by controlling the expression of a VP14-like gene; (2) a vector containing the oligonucleotide ligated operably to the regulation sequence; (3) a plant transformed with the vector; and (4) a method for regulating abscisic acid synthesis in a plant including the transfer of the above oligonucleotide to it. The gene is useful for constructing drought resistant rice.
                                                                                                                                                                                                                                                                                                                (NORQ )
                                                                                                                                                                                               Oligonucleotide encoding gene for regulplants, useful for constructing e.g. godrought resistance and ear-germination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rice abscisic acid synthesis associated DNA SEQ ID

```
New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
```

Claim 1; Page 494; 747pp; English

Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacla, poplar, sweetgum, taak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, homeodic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and EREBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements The present invention relates to novel plant transcription factors from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, LIM domain, AP2 and ERBBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11-MAR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                       Neoxanthin oleavage enzyme is used for improving stress tolerance in a plant when expressed in a plant cell. The invention also relates to methods for increasing or decreasing stress tolerance in a plant by introducing the DNA into the plant, and a transgenic plant into which a neoxanthin cleavage enzyme is introduced. The improvement of stress tolerance in plants is useful, for example in plant breeding. Neoxanthin cleavage enzyme genes are useful for producing transgenic plants. An arid land can be improved by growing transformant weed for several years and then removing the weed by specifically lowering stress tolerance in the weed by inducing an inducible promoter. The present cDNA sequence encodes arabidopsis thaliana neoxanthin cleavage enzyme, AtNCED2 cDNA is obtained from an Arabidopsis plant-derived cD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1692
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to neoxanthin cleavage enzymes and their corresponding cDNA molecules. Neoxanthin cleavage enzyme plays a key role in endogenous abscisic acid (ABA) biosynthesis under drought stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A DNA encoding a protein with a neoxanthin cleavage activity for producing transgenic plants with improved or decreased stress to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Neoxanthin cleavage enzyme; A stress tolerance; transgenic

The gene is useful for regulating gene expression in a plant, in response to a stimulus such as infection with a pathogen, damage from a pathogen, hydrogen peroxide, jasmonic acid, methyl jasmonate, salicylic acid, oxalic acid or expression of a gene encoding oxalic acid oxidase. The genes are also useful for stem-preferred regulation of gene expression a plant. The genes are useful in agriculture, particularly in the breading of crop plants with improved agronomic traits, for modifying abscisic acid (ABA) metabolism and for modifying amino acid transport a content in plants. The present sequence represents cDNA encoding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to defence-related signalling genes isolated from the sunflower (Helianthus annuus). The genes encode a neoxanthin cleavage enzyme (NCE), an amino acid permease (AAP) and a glutamic acid rich protein (GRP). The signalling gene is useful for increasing the resistance of a plant to a pathogen such as fungus, virus, bacterium, nematode or insect (e.g. European corn borer), preferably Sclerotinia spp., Phoma spp., or Phomopsis spp., by stably incorporating a specific specifi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sunflower neoxanthin cleavage enzyme (NCE).

                       Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, LIM domain, AP2 and EREBS, zinc finger domains of type 2 Cys2His2, CCAAT box elements
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1121

```
New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
```

Claim 1: Page 599; 747pp; English.

The present invention relates to novel plant transcription factors from Eucalyptus grandis or plans radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor mabe used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and ERBBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements may

                                                                                                                                                                                              //note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: //note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The cDNA library was constructed from mRNA isolated from unexpanded leaves and the shoot tips of 2 week old seedling from the cultivar Williams. The 2 week old seedlings were salt stressed in a solution of 500mM NaCl for 3 days prior to harvesting. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-xhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library was constructed in the laboratory of Dr. Randy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (800)-533-4363
